Memo to Coal  
Exploration File

RE: Road Construction  
Wild Horse Ridge Exploration  
Beaver Creek Coal Company  
CEP/015/007  
Emery County, Utah

On Monday, September 27, 1982 Division personnel made a cursory on-site inspection of the exploratory road being constructed in Bear Canyon for Beaver Creek Coal company. Division personnel present were Ev Hooper, Tom Tetting, Tammy Balkenbush, and Cy Young.

Construction on the road was proceeding with the use of two D-9 cats and there was blasting in the area during the on-site visit. Every effort seems to have been made to keep debris out of the stream drainage and culverts were in place at the proposed locations per the exploration maps. Due to recent rains the road was quite muddy and some debris had slid down into the stream bed around the culverts. Dick Robison, of Beaver Creek Coal has assured the Division that this debris will be removed when the ground dries out.

It is recommended that, upon completion, the road be inspected for compliance.
